

Have you heard of green hydrogen (H2V)?

Written by: Horiens - 14/08/2023

Check out the article by Carlos Lichtenberger, leader of the Risk and Insurance for Infrastructure and

Concessions at Horiens.

Green hydrogen (H2V) is considered the fuel of the future because it is produced from clean energy sources, has a significant energy storage capacity, and holds potential for application in industries with high carbon emissions intensity. Projects in various regions of the world are starting to emerge, but it is in Brazil where green hydrogen finds the most fertile environment to succeed in large-scale initiatives.

Learn more in the article “Risks and Insurance in Green Hydrogen Projects,” written by Carlos Lichtenberger, leader of the Risk and Insurance segment for Infrastructure and Concessions at Horiens.

“The insurance sector plays a crucial role in the face of the decarbonization commitments being undertaken globally by governments, creditors, investors, and EPC contractors (responsible for executing large-scale projects).”
